## Current issues about supply chain resilience

- The realization of a society where everyone has access to health screening in emerging countries is a crucial issue that underpins UHC.
- To advance medical technology and services, it is necessary to utilize reliable medical data safety and legally.
- In this study, we aim to improve access to health screening in India through multiplying of health screening centers and establish a data supply chain system to create new value in medical data.  
Through these projects, we aim to contribute to customers and stakeholders in the medical field through creating a data-driven society.

## Details of demonstration

- Multipleization of health screening centers
- Expansion of the medical data supply chain infrastructure
- Development of AI for analyzing medical data
- Establishing a system for utilizing medical data

## Expected outcome

- The realization of a world where many residents in India have access to health screening and a society of health through health screening.
- Greatly advanced healthcare products and services through utilization of medical data, and creation of new businesses.
- Expansion of a health screening center business in India.
